

Dear ASC X12 Members,

I am pleased to announce that ASC X12's newest reference site is now available at <http://examples.x12.org/>. The ASC X12 Examples Web Site provides convenient access to examples of ASC X12 transaction transmissions, including the data stream and a description of the associated scenario. There is currently one example posted for reference. Additional examples from ASC X12 Technical Reports will be added to the website over the next few weeks. ASC X12 subcommittees and implementers across the many industries which depend on ASC X12 transactions are invited to submit transaction examples for inclusion on this web site. All examples will be validated for syntax accuracy based on the appropriate version of the Standard before being posted to the website.

ASC X12 continues to focus on products, tools and services that assist implementers in all sectors by improving communication, increasing consistency between ASC X12 implementations and smoothing the implementation process. The new ASC X12 Examples web site is a great resource for implementers of ASC X12 transactions and anyone seeking to learn more about ASC X12 transactions. I'm certain that ASC X12 members and other implementers will find this web site informative and helpful. I am looking forward to watching this example library grow and expand over time.

If you have questions about this web site or suggestions for other products, tools or services that would assist implementers, please send them to [X12Chair@ASCX12.org](mailto:X12Chair@ASCX12.org).

Cathy Sheppard  
ASC X12 Chair
